

RESEARCH BATCH REPORT

Nine Sectors, One Pattern

What 596 Domains Show About DNS Security

METHODOLOGY	NODA-v1.0 (First Release)	DOMAINS SCORED	596 (9 sectors)
CHECK DATE	2026-08-07 / 2026-08-11	PUBLISHER	NODA / MarinaDNS

1. Sample Summary

This report synthesizes 596 domains across nine sectors scored earlier in this research series — DNS/hosting infrastructure, financial services, cloud/SaaS hyperscalers and mid-market, government, healthcare, media, ISPs, and VPS/hosting providers. Institutional habit, not technical capability, is the strongest predictor of DNS security posture across the entire dataset: sectors with a written compliance or audit obligation consistently outscore sectors without one, independent of technical sophistication.

1.1 Sector Breakdown

Sector	n	Mean BP	Median BP	Mean Health
DNS/Hosting Infrastructure	72	81.0	82.5	95.7
Financial Services	99	82.6	83	97.5
Cloud/SaaS Hyperscalers	49	78.7	79	95.4
Cloud/SaaS Mid-Market	51	74.5	71	97.9
Government (non-US-mandate)	80	84.5	87	95.6
Healthcare	65	78.5	75	95.4
News/Media	69	75.1	71	97.1
Large ISPs	61	81.1	83	94.6
VPS/Hosting	50	76.4	75	96.2

2. Methodology Summary

NODA-v1.0 produces two independent composite scores per domain — **Health** (does the DNS infrastructure function correctly, with no active operational risk) and **Best Practice** (does it conform to recommended standards and hardening practices beyond bare function). The two scores are never blended into one figure: a domain can score highly on one axis while scoring poorly on the other, and this specification treats that outcome as informative, not contradictory.

Each of the 41 checks in the methodology is deterministic and belongs to exactly one of five weighted categories — Infrastructure (30%), Security (25%), Email Authentication (20%), Reliability (15%), and Operational Best Practices (10%) — and is scored Pass (1.0), Warning (0.5), or Critical (0.0). A Conditional check (for example, DKIM or MX-dependent checks) resolves to Not Applicable when its prerequisite record set is absent, and is excluded from both the numerator and denominator of whichever score it would have contributed to, without reducing its category's overall weight. Full specification: [noda.marinadns.io/methodology](#).

3. A Note on Intent

This report reports the output of a deterministic, published, and open technical methodology applied identically to every domain listed. It describes DNS configuration state as observed on the check date only — it is not a judgment of any organization's overall security posture, engineering quality, leadership, or fitness as a vendor, and nothing in this report should be read as investment guidance or a claim of financial materiality regarding any publicly traded company named here. Configurations change; a score reflects a specific, fixable technical state on a given day, not a permanent verdict. No company or individual is singled out for criticism — every domain was scored under the same public rule set, and any reader can run the same 41 checks against their own domain at [noda.marinadns.io](#).

4. Full Results — All 596 Domains

sorted by Best Practice, descending

#	Domain	Sector	Best Practice	Health
